Session – 3

Task-1.

Create a table called Playlist with columns: id (INT, primary key), song_name (VARCHAR), artist (VARCHAR), and duration (INT, seconds). Insert a single row for your current favorite song.

Solution:

```
CREATE TABLE Playlist (
  id INT PRIMARY KEY,
  song_name VARCHAR(255),
  artist VARCHAR(255),
  duration INT
);

INSERT INTO Playlist (id, song_name, artist, duration)
VALUES (1, 'Blinding Lights', 'The Weeknd', 200);
```

Task-2.

Insert 3 new rows into the Playlist table for songs you recently listened to on Spotify, including their song_name, artist, and duration.

Solution:

```
INSERT INTO Playlist (id, song_name, artist, duration)
VALUES
(2, 'Kesariya', 'Arjit Singh', 268),
(3, 'Brown Munde', 'AP Dhillon', 267),
(4, 'Intro', 'Various Artists', 90);
```

Task-3.

Update the artist name for one of your Playlist entries to fix a typo (for example, change 'Arjit Singh' to 'Arijit Singh') using the UPDATE statement with a WHERE clause.

Solution:

```
UPDATE Playlist
SET artist = 'Arijit Singh'
```

WHERE id = 2;

Task-4.

**Delete a song from the Playlist table where the duration is less than 120 seconds using the DELETE statement and a WHERE clause.

Hint: Make sure your WHERE clause is specific so you don’t accidentally delete all rows.**

Solution:

```
DELETE FROM Playlist

where duration < 120;
```

Task-5.

**Write an SQL statement that would update the song_name for all songs by 'AP Dhillon' in your Playlist to add '(Remix)' at the end of the name, but only if the duration is more than 180 seconds.

Constraint: Combine UPDATE with WHERE to target only the correct rows.**

Solution:

```
UPDATE Playlist

SET song_name = CONCAT(song_name, ' (Remix)')

WHERE artist = 'AP Dhillon' AND duration > 180;
```
